

CustomCAD System Requirements

- AutoCAD® 2005 or AutoCAD® 2006 software
- Intel® Pentium III or later processor or compatible, 800 MHz or higher
- Microsoft® Windows XP (Professional, Home Edition, or Tablet PC Edition with SP1 or SP2), Windows 2000 Professional with SP4 or later
- 512 MB RAM
- 500 MB free disk space for installation
- 1024x768 VGA with color
- Microsoft Internet Explorer
- CD-ROM drive
- Mouse, trackball, or other pointing device

The preceding requirements list is recommended for effective use of CustomCAD™ software. These requirements should also be sufficient to use AutoCAD® 2006 software and any previous versions of AutoCAD®.

In order to improve your designing experience:

- Add more RAM (memory) to your computer. Upgrade from 512MB to 1024MB (1GB) in order to improve processing speed.
- Buy a faster processor. The faster the processor, the faster your drawings will load, and draw.
- Better display resolution. You can buy systems with larger display screens and more detailed picture quality. This will allow you to see more of your drawing at a time and in greater detail.
- Larger hard disk capacity. The larger the disk storage space, the more drawings you can save on your computer.
- A backup device. The use of tape, CD or standalone disk drives will allow you to save your data in case of a system failure.

There are few systems that you can buy in today's marketplace that would not work with CustomCAD™ and AutoCAD®.
